

## Rocksi – Robot Blocks Simulator

Nikolas Dahn

- We make robots accessible for
  - Small and medium sized businesses
  - Teachers and children
  - The general public
- Through courses, lectures, workshops
- We enable to enable by reaching out to multipliers
  - People who are willing to help our mission
  - Teachers, unions, continued education centers, ...

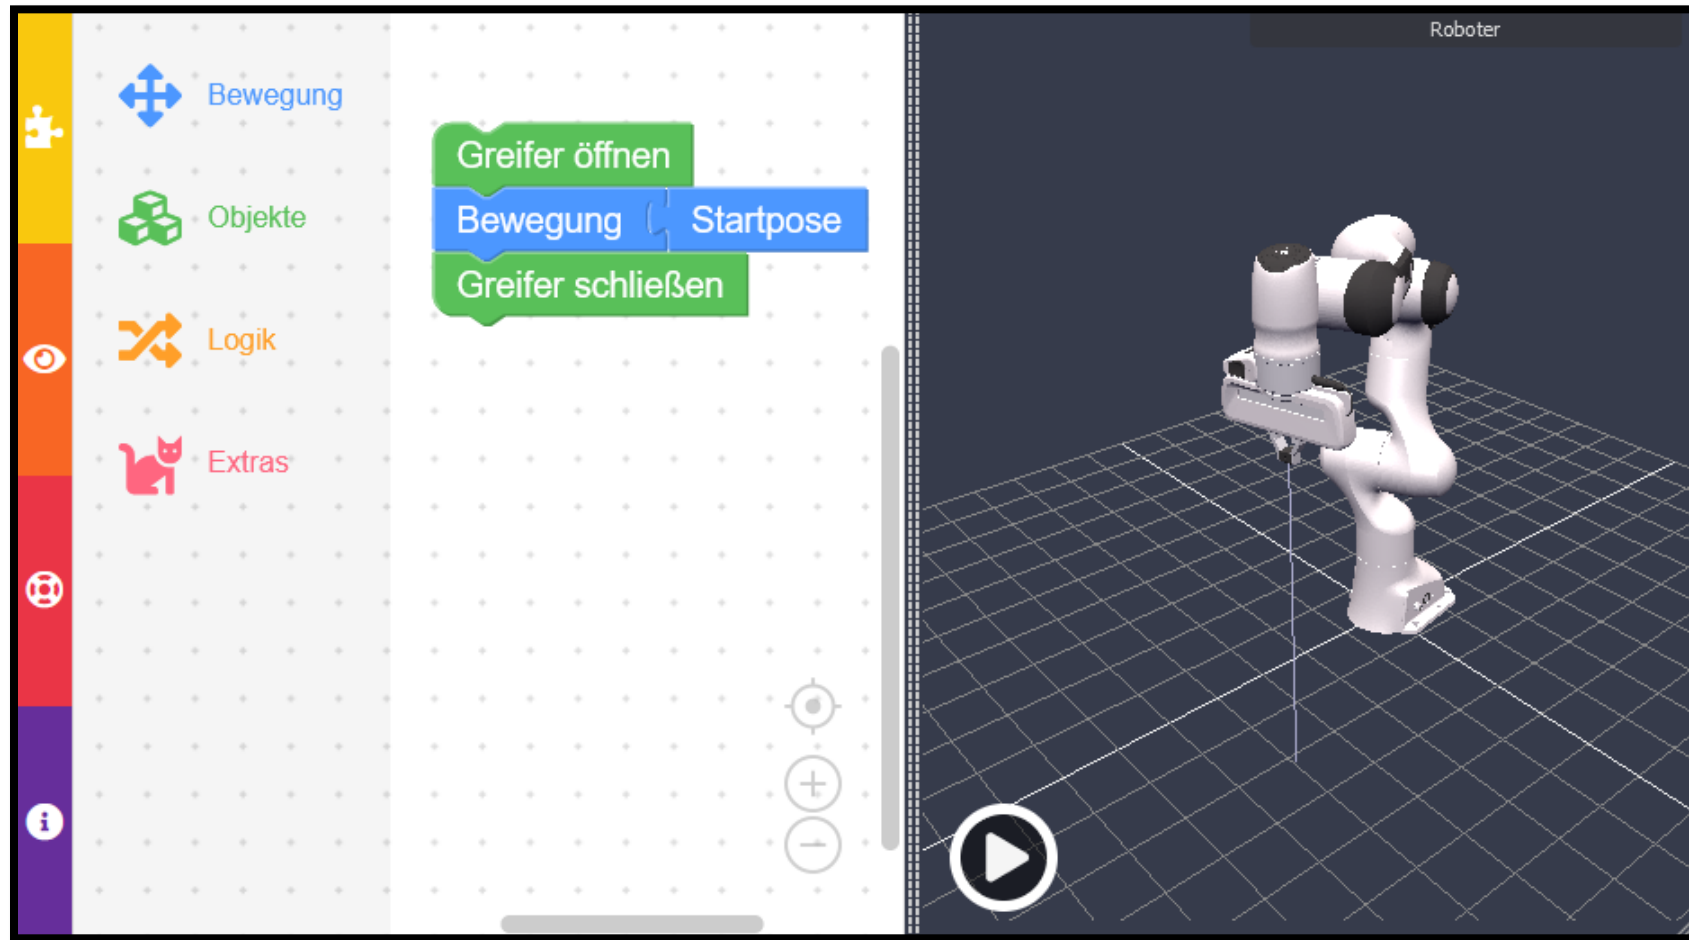

- Robots are expensive

- Even in Germany schools can only afford 2-3 industrial grade robots – with funding!
- Unions, education centers, etc. usually don't have access to robots
- Only people with access to robots can get to know them properly

- People can talk about robots, but they can't show or touch them

- Wouldn't it be great if we could give every person on the planet access to robots?

- Robot Blocks Simulator
  - Browser = platform independent
  - Intuitive programming interface
  - Free of charge
  - Accessible anywhere
